

FIG. 1 is a perspective view of a storage container 10 in an open position. The container 10 includes a base 12, a lid 14, and a divider 16. The divider 16 is shown in a partially open position, revealing a series of compartments 18. The compartments 18 are formed by a series of parallel dividers 20 and 22. The lid 14 is shown in a partially open position, revealing a series of compartments 24 and 26. The compartments 24 and 26 are formed by a series of parallel dividers 28 and 30. The container 10 is shown in a perspective view, with the lid 14 and divider 16 being hinged to the base 12. The base 12 is shown in a perspective view, with the lid 14 and divider 16 being hinged to the base 12. The divider 16 is shown in a partially open position, revealing a series of compartments 18. The compartments 18 are formed by a series of parallel dividers 20 and 22. The lid 14 is shown in a partially open position, revealing a series of compartments 24 and 26. The compartments 24 and 26 are formed by a series of parallel dividers 28 and 30. The container 10 is shown in a perspective view, with the lid 14 and divider 16 being hinged to the base 12. The base 12 is shown in a perspective view, with the lid 14 and divider 16 being hinged to the base 12.

FIG. 3 is a perspective view of the device in a closed position. The device includes a main body 14 with a top surface 22 and a bottom surface 16. A central vertical member 18 is positioned within the body. A rectangular component 26 is mounted on the central member 18. The component 26 has two circular openings 40. The top surface 22 features two sets of electrical contacts 36, each with a corresponding hook 52. The side walls of the body are designated by 20.
